

Immunogenic peptides of foot-and-mouth disease viruses

A b s t r a c t

The present invention relates to FMDC vaccine based on peptides having a sequence of at least 8 amino acids, which corresponds to a partial sequence of the non-structural protein region of FMDV, which was selected by immuno-reactivity with FMDV-specific antibodies or by immunoreactivity with FMDV-specific T lymphocytes, and to their production and their use.
